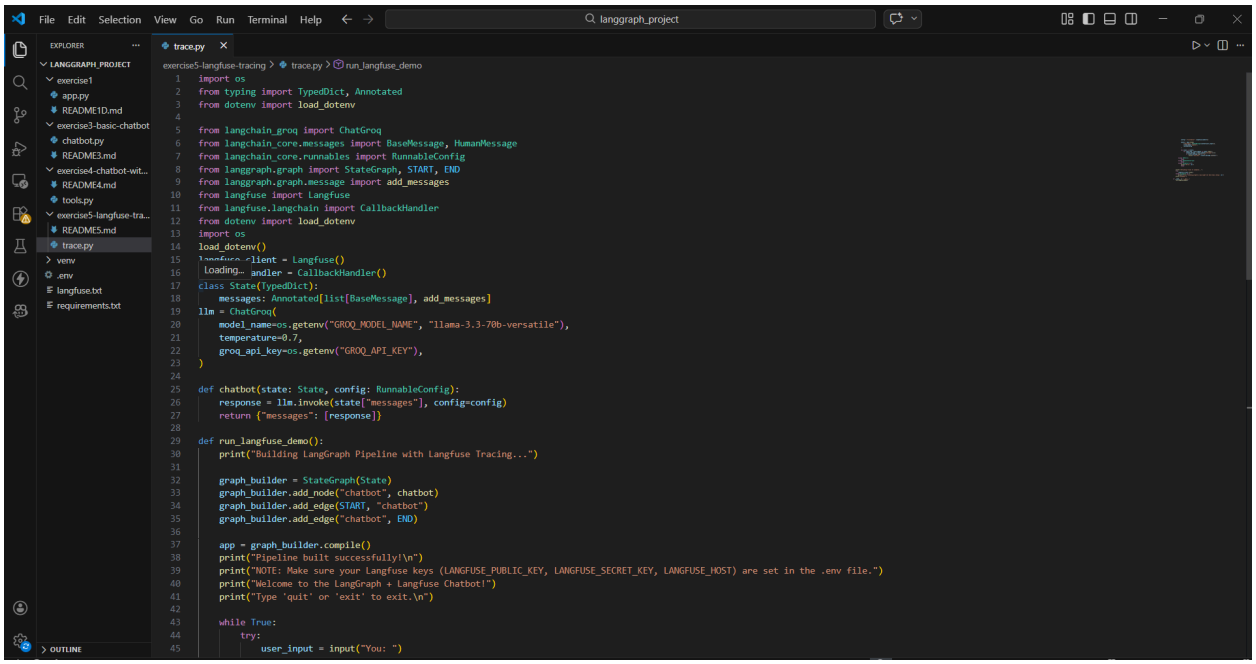
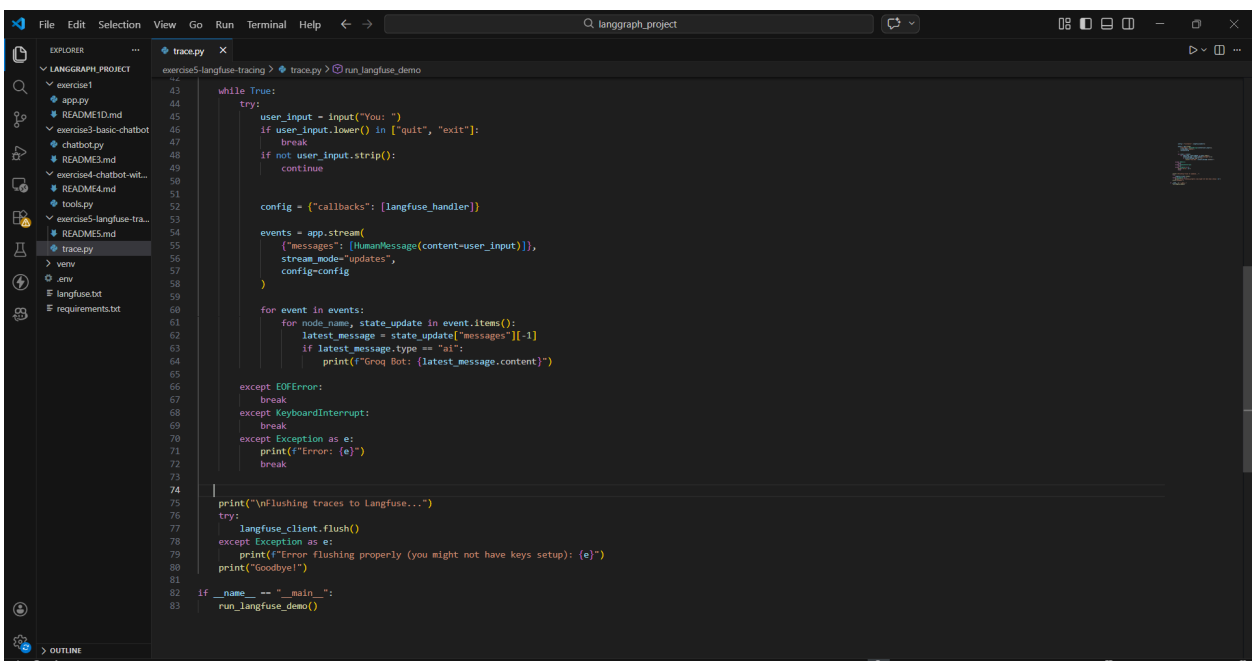
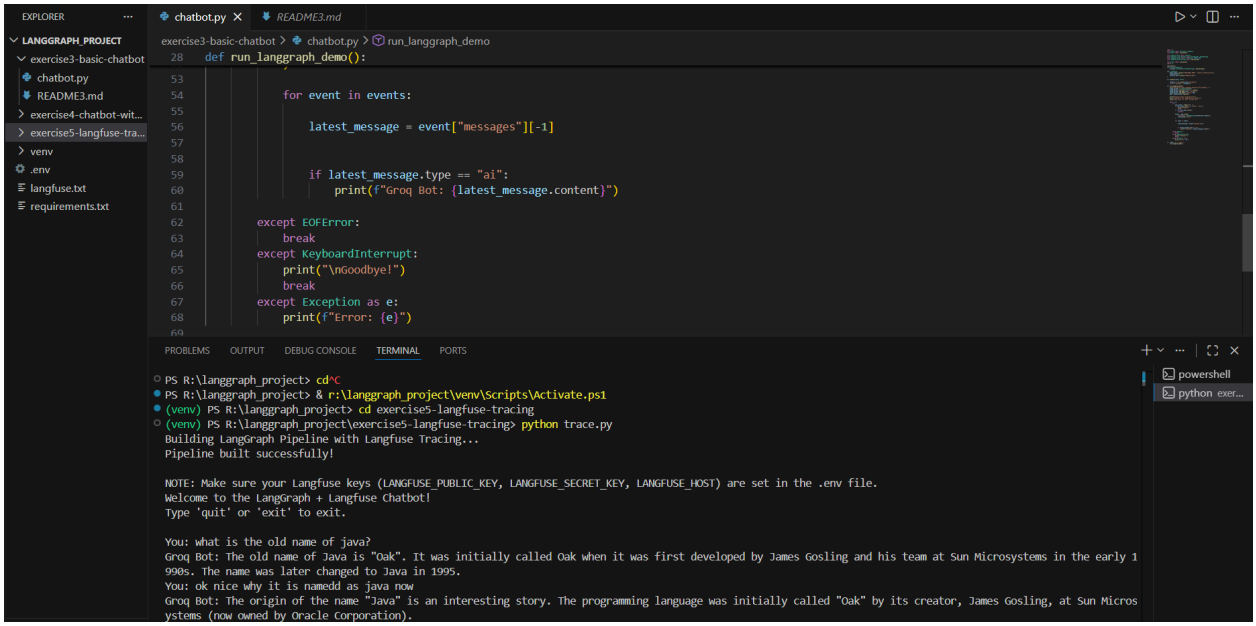
# SCREENSHOT(EX5)

## LangGraph Chatbot with Langfuse Monitoring

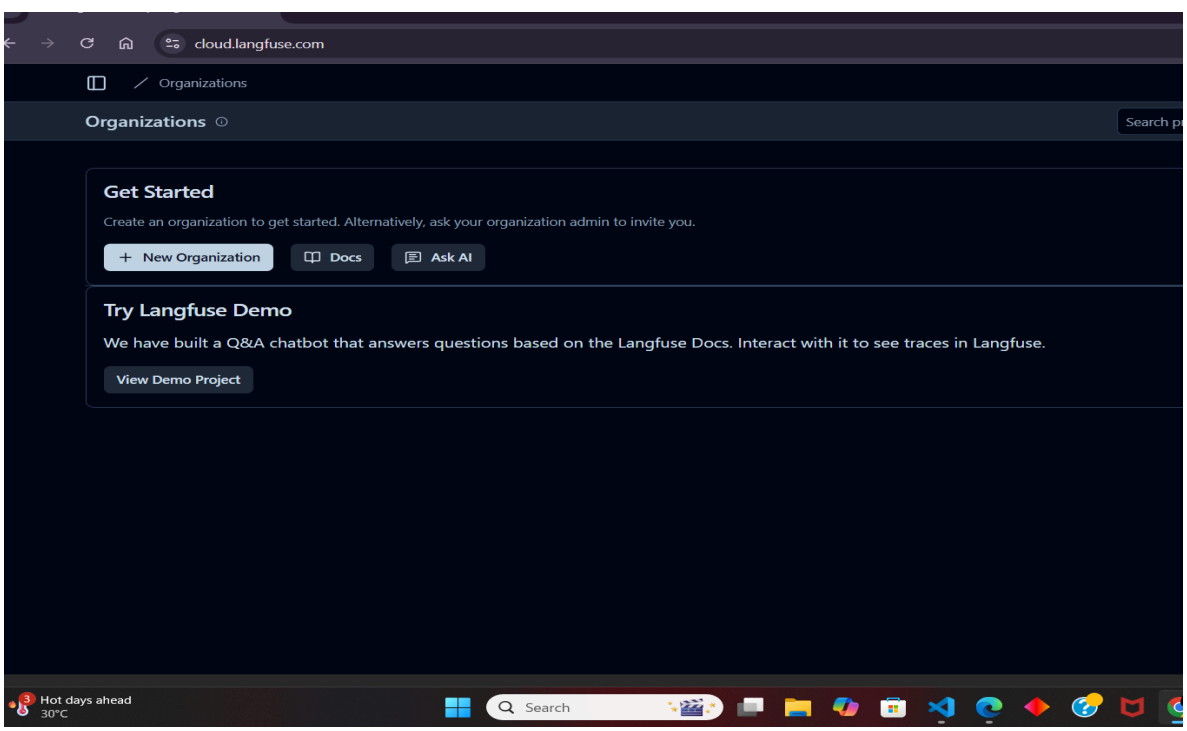






# Langfuse Organization Dashboard

This screen shows the created organization and project used for monitoring the chatbot.

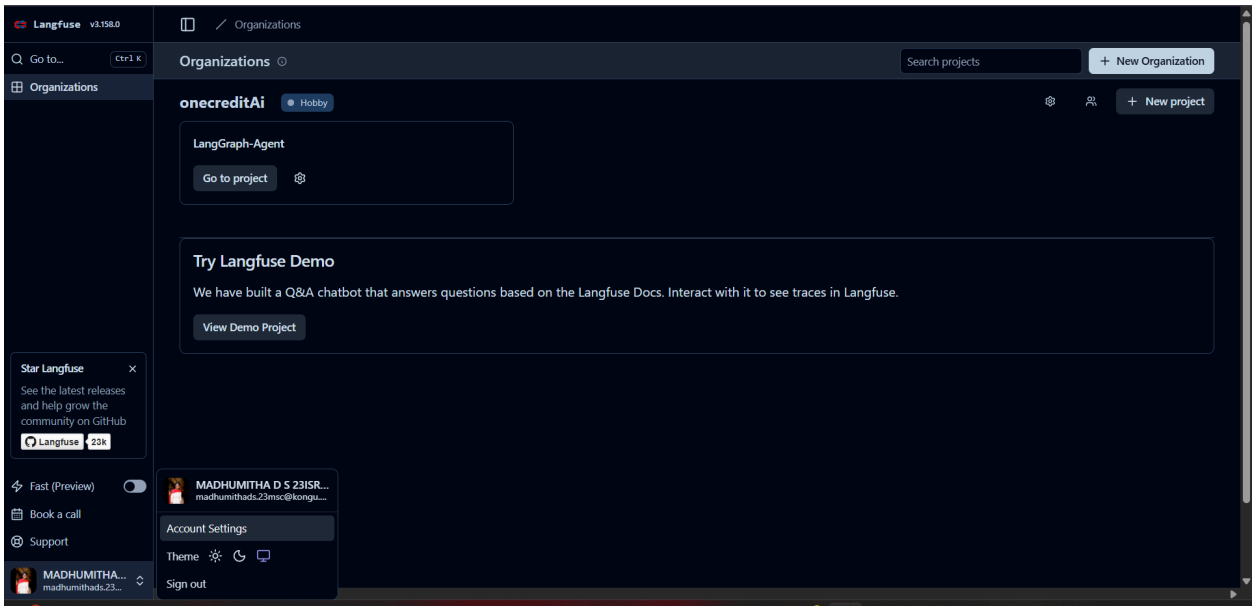


# Langfuse Project Dashboard

The project dashboard shows information about traces, model cost, and token usage.

Key observations:

- Total traces tracked: 3
- Model used: llama-3.3-70b-versatile
- Token usage recorded
- Cost monitoring available

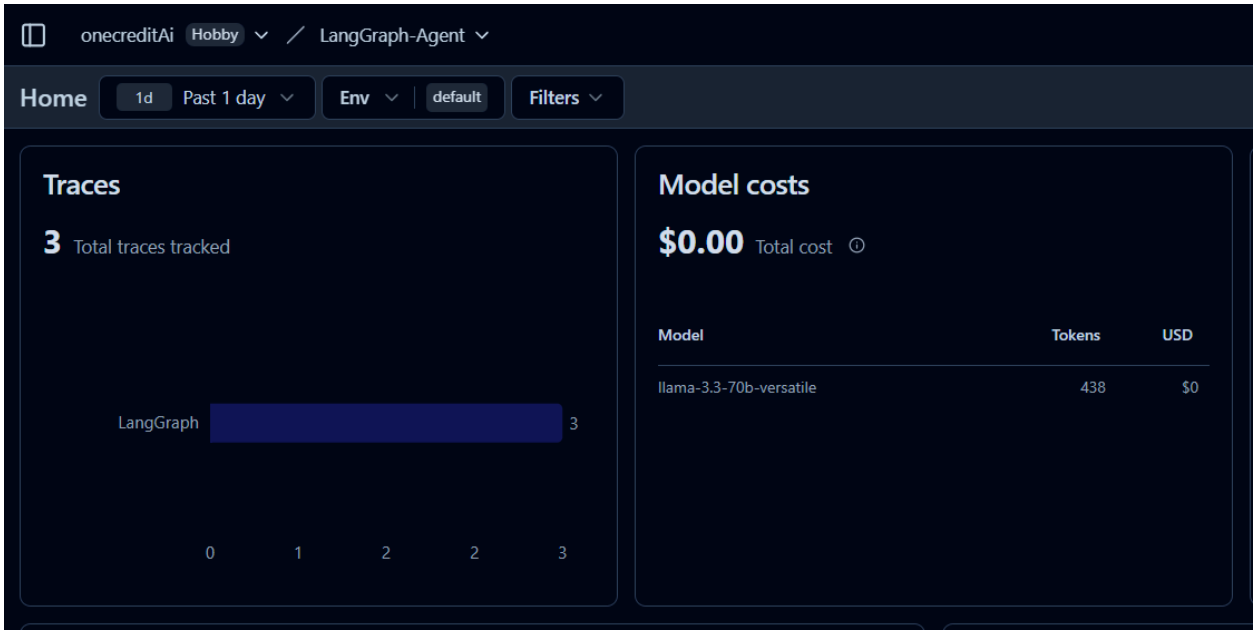


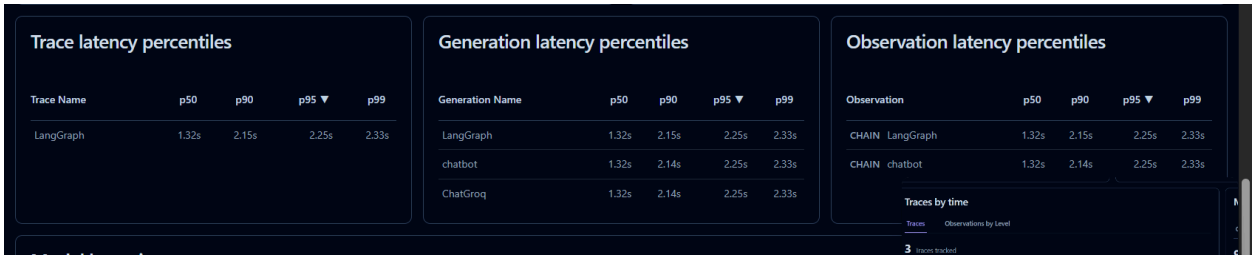
# Trace Analytics

The trace analytics section shows the number of chatbot executions over time.

The graph displays:

- Trace count
- Execution timestamps
- System performance





# Key Features Demonstrated

This exercise demonstrates:

- LLM tracing and observability
- AI workflow monitoring
- Performance analytics
- Token usage tracking

Monitoring tools like Langfuse are important when deploying production AI systems.
